

Introduction

ApoGI™ is an integrated, automation platform that leverages AI (Artificial Intelligence) and ML (Machine Learning) and puts focus on standards and metadata management to streamline processes and the generation of artifacts typically associated with the clinical study lifecycle.

Ensuring process/artifact consistency, streamlining and automating repetitive tasks and artifact generation to allow subject matter experts to focus on science and deriving additional value/insights from clinical trial data.

Key Features

- Next generation enterprise platform
- Ability to integrate and leverage data from multiple sources
- Ability to anonymize the data for sharing it internally or externally in real time
- Leveraging new technologies to support artifact generation from protocol to CSR
- Automated process workflows to facilitate Governance, Artifact Generation, Review / Approval / Sign-off
- Availability of Structured Governance Framework to track metadata at multiple hierarchical levels
- Impact Analysis/Traceability Tool (across all levels)
- Modular system to support your growing needs
